

Tutorial 2

Number Bases

Exercise 1

- Convert the following numbers into their base-10 representations:

(1) 462_7	(3) 11101101_2	(5) 377_8	(7) $12AD_{16}$
(2) $4BA_{12}$	(4) 1022_3	(6) BAC_{16}	
- Convert the following base-10 numbers into the specified base. You should use the successive division method.

(1) $275 \rightarrow \text{base } 2$	(3) $687 \rightarrow \text{base } 16$	(5) $4,321 \rightarrow \text{base } 8$
(2) $564 \rightarrow \text{base } 2$	(4) $3,201 \rightarrow \text{base } 16$	

Exercise 2

Quick conversion into a base- 2^n representation:

- | | |
|--|--|
| (1) $AC7E_{16} \rightarrow \text{base } 2$ | (5) $ABCD_{16} \rightarrow \text{base } 8$ |
| (2) $BCD_{16} \rightarrow \text{base } 2$ | (6) $2074_8 \rightarrow \text{base } 16$ |
| (3) $1234_{16} \rightarrow \text{base } 2$ | (7) $1111100100101010_2 \rightarrow \text{base } 16$ |
| (4) $5567_8 \rightarrow \text{base } 2$ | (8) $1110101100101010_2 \rightarrow \text{base } 8$ |

Exercise 3

- Work out the value of the base (b) so that the following identities are true:

(1) $132_b = 30_{10}$	(2) $2A_{16} = 36_b$	(3) $22_b \times 21_b = 502_b$
-----------------------	----------------------	--------------------------------
- Work out the smallest values of the bases (a and b) so that the following identities are true:

(1) $101_a = 401_b$	(2) $501_a = 50001_b$	(3) $12_a = 1002_b$
---------------------	-----------------------	---------------------

Exercise 4

- How can an even number be identified in an even base?
- How can an even number be identified in an odd base?

Exercise 5

- Convert the following numbers into their base-10 representations:

(1) 1101.011_2	(2) 123.42_8	(3) $BAC.028_{16}$
------------------	----------------	--------------------
- Convert the following numbers into the specified base:
 - (1) $164.76_{10} \rightarrow \text{base } 8$ (3 digits after the point)
 - (2) $24.42_{10} \rightarrow \text{base } 2$ (7 digits after the point; why 7 digits?)
 - (3) $69.23_{10} \rightarrow \text{base } 16$ (3 digits after the point)
 - (4) $11011000111.010011011_2 \rightarrow \text{base } 16$
 - (5) $1011110100.1111011_2 \rightarrow \text{base } 8$
